Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

----------------------	----

Section 1 Introduction

CHAPTER 1 A New Discipline: Climate Change Biology.....	3
A Greenhouse Planet.....	4
Boundaries of Life.....	7
Shifting Interactions.....	8
Chemistry of Change.....	9
Linkages Back to Climate.....	9
Climate Change Biology.....	10
CHAPTER 2 The Climate System and Climate Change.....	13
The Climate System.....	13
Evolution of the Earth's Climate.....	16
Natural Drivers of Change.....	19
Major Features of Present Climate.....	24
Stable States of the System.....	28
Human-Driven Change: Rising CO ₂	30
Rapid Climate Change.....	34
Change and the Global Carbon Cycle.....	39
Modeling the Climate System.....	41
Regional Climate Models.....	45
Commonly Used GCMs.....	48
Emissions Scenarios.....	50
GCM Outputs.....	50
Biological Assessments with Downscaled Data.....	52
Further Reading.....	52

Section 2 The Impacts of Human Induced Climate Change

CHAPTER 3 Species Range Shifts.....	55
First Sign of Change: Coral Bleaching.....	56

	Acidification—The CO ₂ Double Whammy	59
	First Changes on Land	60
	Mounting Evidence of Range Shifts	62
	Patterns within the Patterns	71
	Extinctions	72
	Freshwater Changes	75
	Pests and Pathogens	76
	Further Reading	79
CHAPTER 4	Phenology: Changes in Timing of	
	Biological Events Due to Climate Change	81
	Arrival of Spring	83
	Freshwater Systems	87
	Spring Ahead, Fall Behind	89
	Tropical Forest Phenology	89
	Marine Systems	91
	Mechanisms: Temperature and Photoperiod	93
	Life Cycles of Insect Herbivores	94
	Timing Mismatches Between Species	97
	Further Reading	100
CHAPTER 5	Ecosystem Change	101
	Tropical Ecosystem Changes	101
	Cloud Forests	103
	Temperate Ecosystem Change	107
	High Mountain Ecosystems	111
	Glacier and Snowpack-Dependent Ecosystems	113
	Polar and Marine Systems	116
	Polar Food Webs: Changes in the Southern Ocean	120
	Tropical Marine Systems	120
	Pelagic Marine Systems	123
	Changes in Ocean Chemistry	125
	Ecosystem Feedbacks to Climate System	126
	Further Reading	130
Section 3	Lessons from the Past	
CHAPTER 6	Past Terrestrial Response	133
	Scope of Change	133
	The Earth Moves	134
	Climate Runs Through It	136
	Fast and Far: The Record of the Ice Ages	140
	Ice Racing in North America and Europe	141

	Out of Land: The Southern Temperate Response	144
	North Meets South	145
	Rapid Change: The Younger Dryas	148
	Tropical Responses	150
	Milankovitch Forcing in the Biological Record	154
	Lessons of Past Change	155
	Further Reading	155
CHAPTER 7	Past Marine Ecosystem Changes	157
	Effects of Temperature Change	157
	Effects of Sea Level Change	161
	Changes in Ocean Circulation	162
	Changes in Ocean Chemistry	166
	Further Reading	171
CHAPTER 8	Past Freshwater Changes	173
	Lakes as Windows to Past Climate	174
	Types of Freshwater Alteration with Climate	179
	Freshwater Biotas, Habitats, and Food Chains	183
	Deep Time: Pace of Evolution and Species Accumulation ...	184
	Recent-Time (Tertiary and Pleistocene)	
	Records of Change	186
	Fast Forward	188
	Further Reading	188
CHAPTER 9	Extinctions	189
	The Five Major Mass Extinctions	189
	Causes of Extinction Events	193
	Climate as the Common Factor in Major Extinctions	194
	Impacts and Climate	195
	Does Climate Change Always Cause Extinction?	196
	Climate and Extinctions in Deep Time	196
	The Past 100 Million Years	198
	The Past 2 Million Years: Extinction at the Dawn of the	
	Ice Ages and the Pleistocene Extinctions	201
	The Missing Ice Age Extinctions	204
	Patterns in the Losses	204
	Further Reading	205
Section 4	Looking to the Future	
CHAPTER 10	Insights from Experimentation	209
	Theory	209
	Laboratory and Greenhouse Experiments	214

	Field Experiments	220
	Results of Whole-Vegetation Experiments	224
	Results of Field CO ₂ Experiments	226
	Arctic Experiments	229
	Further Reading	231
CHAPTER 11	Modeling Species and Ecosystem Response.....	233
	Types of Models	235
	Dynamic Global Vegetation Models	239
	Species Distribution Models	243
	Gap Models.....	252
	Modeling Aquatic Systems	253
	Earth System Models.....	258
	Further Reading	259
CHAPTER 12	Estimating Extinction Risk from Climate Change	261
	Evidence from the Past.....	263
	Estimates from Species Distribution Modeling	265
	Species–Area Relationship.....	267
	A Question of Dispersal.....	268
	The Problem with Endemics	269
	Checking the Estimates	269
	Not Just About Polar Bears Anymore	270
	Are a Million Species at Risk?.....	272
	Why the Future may not be Like the Past	274
	Further Reading	275
Section 5	Implications for Conservation	
CHAPTER 13	Adaptation of Conservation Strategies.....	279
	Early Concepts of Protected Areas and Climate Change	280
	Protected Area Planning	284
	Planning for Persistence.....	286
	Resistance Resilience	289
	Protected Area Management	291
	Marine Protected Areas.....	294
	Protected Areas for Climate Change.....	300
	Further Reading	301
CHAPTER 14	Connectivity and Landscape Management	303
	Area-Demanding Species	304
	Migratory Species	308
	Species Range Shifts.....	310

	Planning for Connectivity.....	311
	Managing Connectivity in Human-Dominated Landscapes....	314
	Regional Coordination	315
	Monitoring	316
	Further Reading	317
CHAPTER 15	Species Management	319
	Threatened Species	319
	Climate Change Impacts on Threatened Species	322
	Species Threatened by Climate Change.....	322
	Assessing Species Threatened by Climate Change	324
	An Iconic Example	326
	Managing Species Threatened by Climate Change.....	328
	Resources for the Job	335
	Further Reading	336
Section 6	Finding Solutions: International Policy and Action	
CHAPTER 16	Mitigation: Reducing Greenhouse Gas Emissions, Sinks, and Solutions.....	339
	Climate Policy.....	339
	Stabilizing Atmospheric Greenhouse Gas Concentrations ..	341
	Practical Steps for the Next 50 Years	342
	Energy Efficiency	344
	Renewable Energy Sources.....	344
	Nuclear Power	348
	The End of Oil.....	350
	Putting the Pieces Together.....	355
	Further Reading	356
CHAPTER 17	Extinction Risk from Climate Change Solutions	357
	Wedges Beyond 50 Years	357
	Past Experience.....	358
	Land use Requirements of Alternate Energy.....	359
	Solar.....	360
	Wind.....	361
	Biofuels	363
	Hydropower, Tidal Power, and Geothermal Power	365
	Nuclear Power	366
	Carbon Sequestration.....	366
	Land use Requirements of Free Air Sequestration Technologies Systems	368

Geoengineering.....	368
Estimating Extinction Risk.....	369
Short-Term Wedges and Long-Term Pathways	371
Further Reading	371
CHAPTER 18 Assessing Risks, Designing Solutions	373
Impacts, Risks, and Adaptation.....	373
The Assessment Process.....	373
Domain and Grain.....	374
Biological Assessment.....	375
Stand-Alone Biological Assessment.....	377
Design of Adaptation Solutions	378
Two Examples	379
And Do It Again	381
REFERENCES.....	383
INDEX.....	393
